Sustainability, climate change, environmental protection are crucial topics whose concern is even more increasing during the last years. The **University of Palermo** and **Gdańsk University** is pleased to present a joint effort aimed at providing a real contribution to the emerging issues mention above. Specifically, the two Universities have decided to share their knowledge and expertise for proposing solutions employing a systematic approach. Two double degrees, in **Civil Engineering** and **Engineering and Innovative Technologies for the Environment**, have been designed starting from the academic year 2020/21.

The synergy of the two universities will be the key for obtaining new well prepared engineers for facing the new future challenges in environmental and civil engineering. Following the signature ceremony at the Rector's venue of Palermo University, the launch of the two double degrees will take place at the Engineering Department during which there will be also a meeting with a Poland delegation.
