Proposal

1: Scientific and/or technical quality, relevant to the topics addressed by the call

1.1 Concept and objectives

Explain the concept of your project. What are the main ideas that led you to propose this work?

Describe in detail the S&T objectives. Show how they relate to the topics addressed by the call, which you should explicitly identify. The objectives should be those achievable within the project, not through subsequent development. They should be stated in a measurable and verifiable form.

1.2 Progress beyond the state-of-the-art

Describe the state-of-the-art in the area concerned, and the advance that the proposed project would bring about. If applicable, refer to the results of any patent search you might have carried out.

Part B: Project description

1.3 S/T methodology and associated work plan

A detailed work plan should be presented, broken down into work packages (WPs) which should follow the logical phases of the implementation of the project, and include consortium management and assessment of progress and results.

- i) Describe the overall strategy of the work plan*
 - ii) Show the timing of the different WPs and their components (Gantt chart or similar)*
 - iii) Provide a detailed work description broken down into work packages:
Work package list (please use table 1.3a);
Deliverables list (please use table 1.3b);
List of milestones (please use table 1.3c);
Description of each work package (please use table 1.3d);
Summary effort table (please use table 1.3e)*
 - iv) Provide a graphical presentation of the components showing their interdependencies (Pert diagram or similar)*
 - v) Describe any significant risks and associated contingency plans*
- Note: The number of work packages used must be appropriate to the complexity of the work and the overall value of the proposed project.*

Milestone number	Milestone name	Work package(s) involved	Expected date ⁽¹⁾	Means of verification ⁽²⁾
1.1	Progress assessment	WP1	12	Internal reports and project meetings

Milestones are control points where decisions are needed with regard to the next stage of the project.

Example 1: a milestone may occur when a major result has been achieved, if its successful attainment is required for the next phase of work.

Example 2: a point when the consortium must decide which of several technologies to adopt for further development

Means of verification: 1) A laboratory prototype completed and running flawlessly; 2) software released and validated by a user group; 3) field survey complete and data quality validated

2. Implementation

2.1 Management structure and procedures

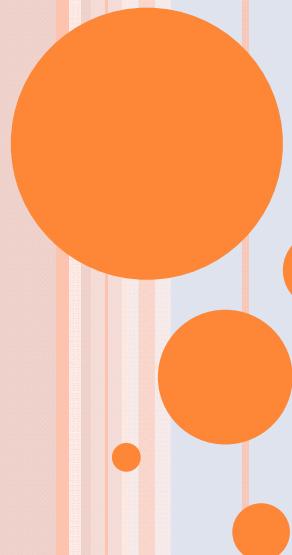

Describe the organisational structure and decision-making mechanisms of the project. Show how they are matched to the complexity and scale of the project.

2.2 Individual participants

2.3 Consortium as a whole

Describe how the participants collectively constitute a consortium capable of achieving the project objectives, and how they are suited and are committed to the tasks assigned to them. Show the complementarity between participants. Explain how the composition of the consortium is well-balanced in relation to the objectives of the project

Describe how your project will contribute towards the expected impacts listed in the work programme in relation to the topic or topics in question. Mention the steps that will be needed to bring about these impacts. Explain why this contribution requires a European (rather than a national or local) approach. Indicate how account is taken of other national or international research activities. Mention any assumptions and external factors that may determine whether the impacts will be achieved.

3.2 Dissemination and/or exploitation of project results, and management of intellectual property

Describe the measures you propose for the dissemination and/or exploitation of project results, and how these will increase the impact of the project.
