

# Exciting Short-Term Position in OPTICS

We are looking for an engineer\physicist\excellent student with experience in optical setups, to work with us on optical measurements of aquatic media.

The work is part of a high-impact interdisciplinary project that addresses fundamental questions in oceanography and climate change science, using optical sensing from drones and floating platforms.

Employment is meant to start immediately, and can be done in the frame of either a part-time or full-time position.

If successful, there is an option to continue the project towards an M.Sc. or Ph.D. in the department of Marine Technologies, School of Marine Sciences, University of Haifa.

The work will be conducted in a high-end optics lab in Ort Braude (Carmiel)
