**Smart Things**

Over 4 Billion Devices Delivered to Broad Range of Markets

# STM32 ARM Cortex-M Based MCUs

Keep Innovating! : Highest CoreMark Result on ARM Cortex-M

# STM32 MCU Design Challenges

5

## PRIORITIES

### High Performance

Performance: > 800 DMIPS  
Dynamic Power efficiency  
Static Power efficiency  
Die size

### Ultra Low Power

Dynamic Power efficiency  
Static Power efficiency  
Performance: > 100 DMIPS  
Die size

### Main Stream

Dynamic Power Efficiency  
Ratio Performance/Power  
Die Size  
Static Power Efficiency

## CHALLENGES

### 1. Power, Robustness, Size Co-Optimization

- Multi-VT / Multi-site / Multi-voltage / Multi Process scenarios
- Ultra low power clock tree
- EMC , Robustness, Safety Compliance

### 2. Multi-Voltage Design Complexity

- Fragmented voltage area hierarchically/topologically
- Voltage scaling
- Always On Cells (isolated / not isolated)

### 3. System Performances & ARM Cortex-M Cores integration Objectives

- Realizing maximum system performance
- Achieving ultra-low power

Broad diversity of challenges, very aggressive time schedules

- 1. Architectural Analysis & Definition of Real Time Safety Diagnostic Hardware for non Automotive Microcontrollers
  - Overview on STM32 microcontrollers
  - Fault Injection simulations on STM32 microcontrollers
  - HW/SW codesign
  - RTL implementation & simulations
- 2. Innovative measurement methodologies on High End STM32 Analog IP peripherals
  - Overview on STM32 analog subsystem
  - Automatic bench measurement design (sw assisted)
  - High End STM32 Analog IPs validation & debug
