

Advancing biomarker discovery beyond genomics

Date Lunedì 19 Ottobre 2026

Time 14:00 – 15:00

Location Università degli Studi di Palermo
Dipartimento di Tecnologie Biologiche, Chimiche e Farmaceutiche - **Aula 5**

The seminar explores how **large-scale proteomics**, including Olink's PEA technology, complements genomics and transcriptomics by linking genetic information to functional biological changes. It highlights the use of protein measurements to **investigate disease mechanisms, identify biomarkers, and characterize molecular signatures**. Particular focus is placed on **multi-omics integration** to provide a more comprehensive understanding of biological systems, disease processes, and clinically relevant phenotypes.

Agenda

- Welcome and insights
- Exploring the new era of proteomics
- From proteins to Insights
- Multi-Omics integration
- Interactive Q&A and networking

Speakers & Contacts

Davide Nocco
