

Horizon Europe and How to approach proposal writing

mourenza@apre.it

AGENDA 16 Maggio 10.00 – 12.00

INTRODUZIONE AL CORSO

Think about a successful proposal

• Main concepts and time organization

Project idea definition, methodology and abstract; time and resources, identification of objectives, results and activities; partnership building **O&A**

PAUSA

How we should approach the proposal writing? – practical view in the biomedical field

- **Excellence:** define your objectives (overall and specifics), describe the complete state-of-the-art, ambition, potential innovation and the right methodology. Sex and gender issues.
- Impact: align with Destination's impacts and topic outcomes, think about further impacts (social, economic, environmental, cultural etc), disseminate, communicate (and exploit) your results to the right target groups, IPR issues.
- Implementation: divide the work in the right work packages, define your results (deliverables), allocate the right efforts to the right partners, consider potential risks and contingency plan to face them, what should you consider when forming a consortium.

Do not forget your potential Ethical issues!

Q&A

Submission and Evaluation

- Sub-criteria evaluation
- Ranking criteria for ex aequo proposals
- Dos and Don'ts from evaluator's prospective

Identify the project idea

Define your idea

Define your idea: **ABSTRACT** one page proposal

Topic	
Title/ACRONYM	
Objective	The aim of the proposal is to The key research question/challenge is to
Background/short description	 Why bother? What problem are you trying to solve? Is it a European priority? Could it be solved at National level? Is the solution already available? Why now? What would happen if we did not do this now? Why you? Are you the best people to do this work?
Results/impact	 Expected results - what will come out of the project? Who will use the results? Why do they want to use the results? How are you planning the transfer of results? What will be changed? Post project situation
Activities/phases (science part)	
Project consortium	
Duration/cost	

ORGANIZE YOUR TIME

FROM THE OPEN CALL TO THE DEADLINE

1st stage Consortium meeting	Aim of the project, research question, distribution of work (Science, Management and Editors!!)	5-6 months before deadline
<u>2nd stage</u> Homework	Proposal writing (inputs from partners – WP leaders and coordinator!)	4-5 months before deadline
3 rd stage Preparation of first draf	First proposal draft (summarized by lead scientist and support service: science, impact, implementation)	3 months before deadline
4 th stage Core group meeting	IN or OUT Final agreement (aim and research question, WP, timeline, outputs/deliverables, budget, etc.)	3 months before deadline
5 th stage Full proposal completion	Proposal writing (including editing, proof reading and external review) (Lead scientist, Support service, External experts)	Last two months

Timeline

- 1. Average time spent by <u>coordinator</u>: 350-450 hours = 45-60 working days (full time)
- 2. Average time spent by Work package leader: 70-100 hours = 9-14 working days (full time)
- 3. Approx. 50% Emailing (!!!)

Application form (proposal template)

Same structure

The proposal contains two parts:

- Part A (web-based forms) is generated by the IT system. It is based on the information entered by the participants through the submission system in the Funding & Tenders Portal.
- Part B is the narrative part that includes three sections that each correspond to an
 evaluation criterion. Part B needs to be uploaded as a PDF document following the
 templates downloaded by the applicants in the submission system for the specific call or
 topic.

Single stage (or 2nd stage)

PARTE A

- 1) General Information
- 2) Participants
- 3) Budget
- 4) Ethics and Security
- 5) Other questions

Template pdf online on the Participant Portal

PARTE B

- 1) Excellence
 - 1.1) Objectives and ambition
 - 1.2) Methodology
- 2) Impact
 - 2.1) Project's pathways towards impact
 - 2.2) Measures to maximise impact Dissemination, exploitation and communication
 - 2,3) Summary
- 3) Implementation
 - 3.1) Work plan and resources
 - 3.2) Capacity of participants and consortium as a whole

Word Document downloadable from the Participant Portal

45 pages max.

General information

Section 1 provides basic data on the proposal. It can be filled in by contacts of the coordinator. Other participants may view this section only. Read-only parts are marked in blue.

X,	

Has this proposal (or a very similar one) been submitted in the past 2 years in response to a call for proposals under any EU programme, including the current call? A 'similar' proposal or contract is one

that differs from the current one in minor ways, and in which some of the present consorbum members are involved.

Please give the proposal reference or contract number

C Yes

XXXXX-X

C No

PART A Administrative

Horizon Europe - Work Programme 2021-2022 Food, Bioeconomy Natural Resources, Agriculture and Environment

Legal and financial set-up of the Grant Agreements	The rules are described in General Annex G.
Financial and operational capacity and exclusion	The criteria are described in General Annex C.
Procedure	The procedure is described in General Annex F.

Innovating with governance models and supporting policies

Proposals are invited against the following topic(s):

HORIZON-CL6-2021-GOVERNANCE-01-01: Mobilising the network of National Contact Points in Cluster 6

Specific condition	15
Expected EU contribution per project	The EU estimates that an EU contribution of around EUR 2.50 million would allow these outcomes to be addressed appropriately. Nonetheless, this does not preclude submission and selection of a proposal requesting different amounts.
Indicative budget	The total indicative budget for the topic is EUR 2.50 million.
Type of Action	Coordination and Support Actions
Eligibility conditions	The conditions are described in General Annex B. The following exceptions apply: Applicants must be Horizon Europe national support structures (e.g. NCP) responsible for Cluster 6 'Food, Bioeconomy, Natural Resources, Agriculture and Environment' and officially nominated to the Commission, from a Member State or Associated Country or any third country associated to Horizon Europe. Only in case and as long as Horizon Europe structures would not yet be officially nominated, national support structures responsible for Societal Challenges 2 (SC2) and 5 (SC5) would be eligible.
Procedure	The procedure is described in General Annex F. The following exceptions apply:
	The granting authority can fund a maximum of the project.
Expected Outcome	In line with the European Green Deal priorities, the successful proposal

will interconnect National Contact Point (NCP) service across Europe and will help develop

Horizon Europe - Work Programme 2021-2022 Food, Biosconomy Natural Resources, Agriculture and Environment 7

innovative governance models enabling sustainability and resilience notably to achieve better informed decision-making processes, societal engagement and innovation.

- An improved and more interconnected National Contact Point (NCP) service across Europe, in the areas covered by Horizon Europe Cluster 6 'Food, Bioeconomy, Natural Resources, Agriculture and Environment', thereby simplifying access to Cluster 6 Horizon Europe calls, lowering the entry barriers for newcomers, and raising the average quality of proposals submitted;
- A more harmonised level of NCP support services across Europe.
- Widening promoting participation in actions in the areas covered by Horizon Europe Cluster 6 'Food, Bioeconomy, Natural Resources, Agriculture and Environment' to new stakeholders, such as, but not limited to, civil society organisations.
- · Enhanced integration of all the crosscutting issues throughout Horizon Europe.
- Increased participation of less active member states, associated countries, regions and stakeholders in the actions funded under Horizon Europe Cluster 6 programme to leverage the full R&I potential.
- Connection with NCP Academy activities.
- Increased cooperation of NCPs with the Enterprise Europe Network.

Scope: Proposals should aim to facilitate trans-national co-operation between National Contact Points (NCPs) in the areas covered by Horizon Europe Cluster 6 'Food, Bioeconomy, Natural Resources, Agriculture and Environment', with a view to identifying and sharing good practices and raising the general standard of support to programme applicants, taking

into account the diversity of actors that make up the action will provide important feedback on is and evaluation.

Proposal should aim to recilitate trans-cluster coor a view to identifying synergies, to make it possi coordination and cooperation we keep to achie networks.

The activities of this topic should build on the k NCP networks developed under Horizon 2000.

NCPs will organise transnational events to commew research activities; to draw lessons from prefor cooperation; to help interested stakeholde structures.

Topic structure

- Conditions related to the topic
- Expected outcomes
- Scope

Horizon Europe: topic structure

Title

 apply the impact logic and reflect the outcomes covered by the topic

Expected outcomes

- brief description of the policy context and intervention logic related to the topic, i.e. the contribution of the expected outcomes of the topic to the impact described at Destination level
- list of the expected outcomes of the topic, précising if projects should address all or some of the outcomes

Scope

 describes the area of R&I that needs to be tackled if the expected outcomes are to be successfully addressed

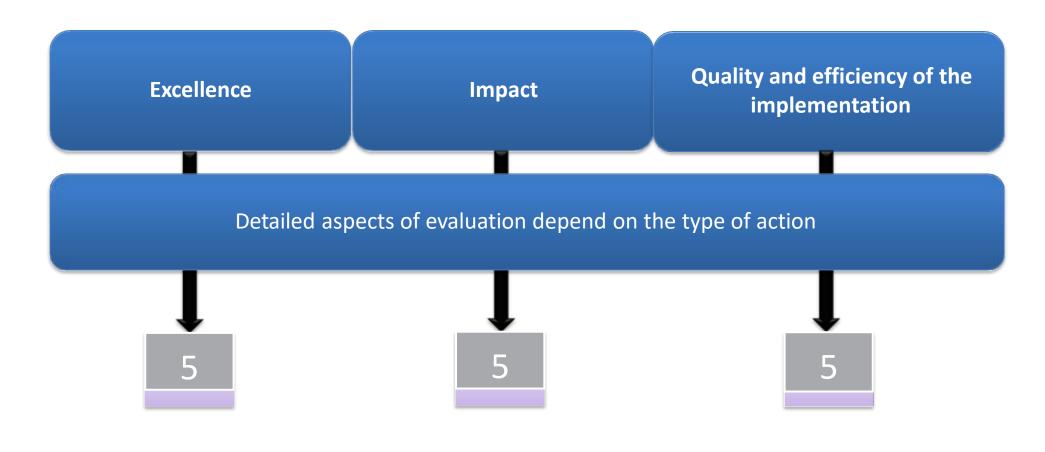

So... how we should approach the proposal writing??

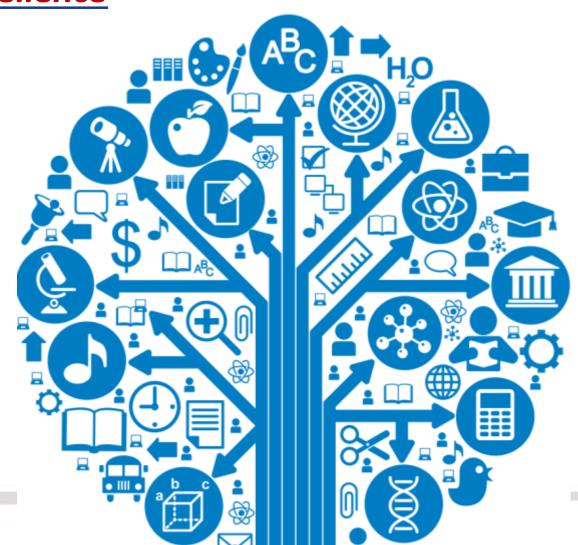

Evaluation criteria

Criterion 1 Scientific and Technological Excellence

1.1 Objectives and ambition [e.g. 4 pages]

- In Briefly describe the objectives of your proposed work. Why are they pertinent to the work programme topic? Are they measurable and verifiable? Are they realistically achievable?
- Describe how your project goes beyond the state-of-the-art, and the extent the proposed work is ambitious. Indicate any exceptional ground-breaking R&I, novel concepts and approaches, new products, services or business and organizational models. Where relevant, illustrate the advance by referring to products and services already available on the market. Refer to any patent or publication search carried out.
- Describe where the **proposed work is positioned in terms of R&I maturity** (i.e. where it is situated in the spectrum from 'idea to application', or from 'lab to market'). Where applicable, provide an indication of the **Technology Readiness Level**, if possible distinguishing the start and by the end of the project.

Please bear in mind that advances beyond the state of the art must be interpreted in the light of the positioning of the project. Expectations will not be the same for RIAs at lower TRL, compared with Innovation Actions at high TRLs.

The objectives must be...

Specific

General Objective

Long term: beyond the duration of the project Improve, strenght, facilitate, realize ...

Main Objective: Start with a **high-level goal** that summarizes the overall purpose of the project. This should be ambitious but realistic.

Specific Objectives

To be realized during the project implementation

Testing, pilot plant, develop new knowledge, ...

Specific Objectives: Break down the main objective into **3–5 specific objectives**. Each should address a distinct aspect of the project (e.g., scientific, technological, societal, or policy-related).

Key Differences

	General Objective	Specific Objectives
Scope	Broad, overarching goal	Narrow, detailed steps
Focus	Long-term impact	Short- to medium-term actions
Alignment	Aligns with the call's expected outcomes	Aligns with work packages and deliverables
Audience	Policymakers, evaluators, stakeholders	Evaluators, consortium members, experts
Example	"Reduce the burden of pollution-related brain diseases."	"Develop AI-driven predictive models for early detection."

1.1.3 Correspondence with the objectives addressed by the call

The following table summarizes the comparison between the call objectives and the project's ones.

Objectives addressed by the call	Project objectives		
	New high efficiency spectrum tuned III-V quantum well solar cells		
	 New highly reliable PV receiver with advanced thermal management system made of cost effective materials 		
	New advanced high acceptance free form optical system		
	 New low cost free form plastic primary mirror with advanced high reflectivity coating 		
	 New low cost free form quartz SOE with anti- reflective coating 		
[A] Demonstrating increased reliability and achieving manufacturing economies of scale	 Front glass with cost-effective highly reliable anti- reflective multifunctional coating 		
are main barriers for concentration-based photovoltaic (CPV) systems.	New module architecture		
	 Simple and reliable sealing method 		
	 Effective low cost humidity management system 		
	New highly reliable tracking system		
	 Simplified structure concepts for easy manufacturing and assembly and installation 		
	 Highly reliable moving parts and driving methods based on brushless motors 		
	 New module's inverter to improve system's performance stability over time and increase system's energy yield 		
[B] In order to enable large-volume production of the CPV systems and reduce their costs, it is necessary to improve the level of integration of the manufacturing of different system	 Design and development of all the system's components and development and demonstration of an integrated manufacturing line. 		

Make yourself the right questions to identify your objectives!!!

- What is the challenge / what are the problems in the specific field (indication etc.)?
- Why should it be solved at European level?
- Is the knowledge/solution already available?
- Why is now the perfect time to do it?
- What is the consortium vision?
- Are the objectives of the project useful to reach the expected impact?
- What needs to be delivered in order to reach the impacts?
- Why are you the right/best consortium to do it?

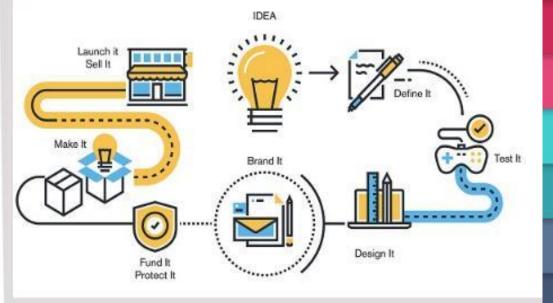

Suggestions—AMBITION: Beyond the state-of-the-art

- Present situation vs <u>future situation</u> (also post-project!)
- Innovation potential of the project results
- Comparative tables (present vs future)
- Abbreviations, acronysms (need to be explained)

TRL - Technology Readiness Levels

How close/far are you from the market?

MEASURE YOUR TECHNOLOGY READINESS LEVELS - TRL How technology ready is your service/product?

Technology Readiness Levels as adapted by the CloudWATCH2 project

Technological Readiness Levels

When relevant it can be very illustrative to make a table of **key elements** of the project and the TRLs before and after the work

Element	Before	After
Handheld Ultrasound technology	TRL3	TRL8
Hyperspectral Imaging	TRL3	TRL5
Acoustic Imaging	TRL2	TRL5

1.2 Methodology [e.g. 15 pages]

Describe and explain the **overall methodology**, including the **concepts, models and assumptions** that underpin your work. Explain **how this will enable you to deliver your project's objectives**. Refer to any important challenges you may have identified in the chosen methodology and how you intend to overcome them. [e.g. 10 pages]

This section should be presented as a narrative. The detailed tasks and work packages are described below under 'Implementation'.

Where relevant, include how the project methodology complies with the 'do no significant harm' principle as per Article 17 of Regulation (EU) No 2020/852 on the establishment of a framework to facilitate sustainable investment (i.e. the so-called 'EU Taxonomy Regulation'). This means that the methodology is designed in a way it is not significantly harming any of the six environmental objectives of the EU Taxonomy Regulation.

- Describe any national or international research and innovation activities whose results will feed into the project, and how that link will be established; [e.g. 1 pages]
- Explain how expertise and methods from different disciplines will be brought together and integrated in pursuit of your objectives. If you consider that an inter-disciplinary approach is unnecessary in the context of the proposed work, please provide a justification. [e.g. 1/2 page]

<u>Suggestions – Description of the overall methodology</u>

- How will be solved the problems and needs described?
- Detailed but <u>concise</u> <u>description</u> of the solution
- Rational why the project is composed this way, in the different stages identified (research, demonstration, etc.)
- Flow chart visualizing the phases of the project and their interconnections
- Verify coherence among objectives, activities, results

1.2 Methodology [e.g. 15 pages]

- For topics where the work programme indicates the need for the integration of social sciences and humanities, show the role of these disciplines in the project or provide a justification if you consider that these disciplines are not relevant to your proposed project. [e.g. 1/2 page]
- Describe how the **gender dimension** (i.e. sex and/or gender analysis) is taken into account in the project's research and innovation content [e.g. 1 page]. If you do not consider such a gender dimension to be relevant in your project, please provide a justification.

Note: This section is mandatory except for topics which have been identified in the work programme as not requiring the integration of the gender dimension into R&I content.

Remember that this question relates to the content of the planned research and innovation activities, and not to gender balance in the teams in charge of carrying out the project.

Sex and gender analysis refers to biological characteristics and social/cultural factors respectively. For guidance on methods of sex / gender analysis and the issues to be taken into account, please refer to http://ec.europa.eu/research/swafs/gendered-innovations/index_en.cfm?pg=home

Integration of the gender dimension in R&I content

Gender Dimension Addressing the gender dimension in research and innovation content entails taking into account sex and gender in the whole research & innovation process

The integration of the gender dimension into R&I content is mandatory, unless it is explicitly mentioned in the topic description

Why is the gender dimension important?

- Why do we observe differences between women and men in infection levels and mortality rates in the COVID-19 pandemic?
- Does it make sense to study cardiovascular diseases only on male animals and on men, or osteoporosis only on women?
- Does it make sense to design car safety equipment only on the basis of male body standards?
- Is it ethical to develop Al products that spread gender and racial biases due to a lack of diversity in the data used in training Al applications?
- Is it normal that household travel surveys, and thus mobility analysis and transport planning, underrate trips performed as part of caring work, which are predominantly undertaken by women?
- Did you know that pheromones given off by men experimenters, but not women, induce a stress response in laboratory mice sufficient to trigger pain relief?
- And did you know that climate change is affecting sex determination in a number of marine species and that certain populations are now at risk of extinction?

1.2 Methodology [e.g. 15 pages]

Describe how appropriate **open science practices** are implemented as an integral part of the proposed methodology. Show how the choice of practices and their implementation are adapted to the nature of your work, in a way that will increase the chances of the project delivering on its objectives [e.g. 1 page]. If you believe that none of these practices are appropriate for your project, please provide a justification here.

Open science is an approach based on open cooperative work and systematic sharing of knowledge and tools as early and widely as possible in the process. Open science practices include <u>early and open sharing of research</u> (for example through preregistration, registered reports, pre-prints, or crowd-sourcing); <u>research output management; measures to ensure reproducibility of research outputs; providing open access to research outputs</u> (such as publications, data, software, models, algorithms, and workflows); <u>participation in open peer-review; and involving all relevant knowledge actors including citizens, civil society and end users in the co-creation of R&I agendas and contents</u> (such as citizen science).

Please note that this question does not refer to outreach actions that may be planned as part of communication, dissemination and exploitation activities. These aspects should instead be described below under 'Impact'.

Open Science practices*

- early and open sharing of research (for example through preregistration, registered reports, pre-prints, or crowd-sourcing)
- research output management including research data management
- measures to ensure reproducibility of research outputs
- providing open access to research outputs (e.g. publications, data, software, models, algorithms, and workflows) through deposition in trusted repositories
- participation in open peer-review
- involving all relevant knowledge actors including citizens, civil society and end users in the co-creation of R&I agendas and contents (such as citizen science)

^{*}Listed in the proposal template

^{**} Mandatory and non-mandatory practices. Mandatory in MGA and WP

1.2 Methodology [e.g. 15 pages]

- Research data management and management of other research outputs: Applicants generating/collecting data and/or other research outputs (except for publications) during the project must provide maximum 1 page on how the data/ research outputs will be managed in line with the FAIR principles (Findable, Accessible, Interoperable, Reusable), addressing the following (the description should be specific to your project): [1 page]
 - Types of data/research outputs (e.g. experimental, observational, images, text, numerical) and their estimated size; if applicable, combination with, and provenance of, existing data.
 - **Findability of data/research outputs:** Types of persistent and unique identifiers (e.g. digital object identifiers) and trusted repositories that will be used.
 - Accessibility of data/research outputs: IPR considerations and timeline for open access (if open access not provided, explain why); provisions for access to restricted data for verification purposes.
 - Interoperability of data/research outputs: Standards, formats and vocabularies for data and metadata.
 - Reusability of data/research outputs: Licenses for data sharing and re-use (e.g. Creative Commons, Open Data Commons); availability of tools/software/models for data generation and validation/interpretation /re-use.
 - Curation and storage/preservation costs; person/team responsible for data management and quality assurance.

<u>Proposals selected for funding under Horizon Europe will need to develop a detailed data management plan (DMP)</u> for making their data/research outputs findable, accessible, interoperable and reusable (FAIR) <u>as a deliverable by month 6 and revised towards the end of a project's lifetime</u>.

For guidance on open science practices and research data management, please refer to the relevant section of the HE Programme Guide on the Funding & Tenders Portal.

Before going further... ask yourself!:

- Does chapter 1 create curiosity and stimulates to carry-on reading?
- Does the layout encourage reading (with pleasure)?
- Check consistency across chapter 1, and across entire proposal
- Are abbreviations explained (when first occuring)?
- Are figures self-explanatory (applicants tend to have too many figures in chapter
 1, and also the wrong figures!)
- Take an Helicopter view on the proposed project: do you get all required information? What is missing? What is overdone?

Criterion 2 *Impact*

2.1 Project's pathways towards impact [e.g. 4 pages]

- Provide a **narrative** explaining how the project's results are expected to make a difference in terms of impact, **beyond the immediate scope and duration of the project**. The narrative should include the components below, tailored to your project.
- a) Describe the unique contribution your project results would make towards (1) the <u>outcomes</u> specified in this topic, and (2) the <u>wider</u> <u>impacts</u>, in the longer term, specified in the <u>respective destinations</u> in the work programme.

Be specific, referring to the effects of your project, and not R&I in general in this field.

State the target groups that would benefit. Even if target groups are mentioned in general terms in the work programme, you should be specific here, breaking target groups into particular interest groups or segments of society relevant to this project.

The outcomes and impacts of your project may:

- **Scientific**, e.g. contributing to specific scientific advances, across and within disciplines creating new knowledge, reinforcing scientific equipment and instruments, computing systems (i.e. research infrastructures);
- <u>Economic/technological</u>, e.g. bringing new products, services, business processes to the market, increasing efficiency, decreasing costs, increasing profits, contributing to standards' setting, etc.
- <u>Societal</u>, e.g. decreasing CO2 emissions, decreasing avoidable mortality, improving policies and decision making, raising consumer awareness.

Only include such outcomes and impacts where your project would make a significant and direct contribution. Avoid describing very tenuous links to wider impacts. However, include any potential negative environmental outcome or impact of the project including when expected results are brought at scale (such as at commercial level). Where relevant, explain how the potential harm can be managed.

2.1 Project's pathways towards impact [e.g. 4 pages]

1 the <u>outcomes</u> specified in this topic

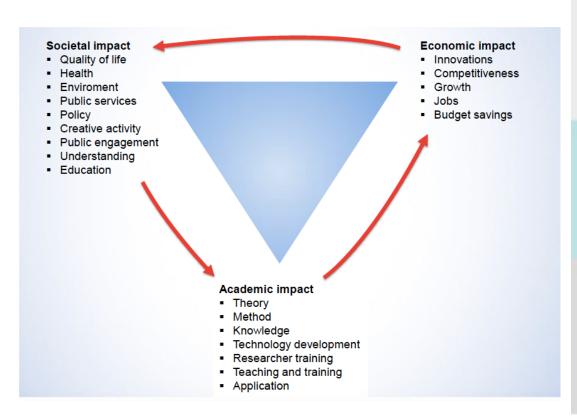

Expected outcomes from the topic	How the project will address
1.	
•••	

1 (2) the <u>wider impacts</u>, in the longer term, specified in the <u>respective destinations</u> in the work programme.

Expected Impacts from the Destination	How the project will address
1.	

The impact in different contests

CULTURAL

Contribution to understanding of ideas and reality, values and beliefs.

ECONOMIC

Contribution to the sale price of products, a firm's costs and revenues (micro level), and economic returns either through economic growth or productivity growth (macro level).

ENVIRONMENTAL

Contribution to the management of the environment, for example, natural resources, environmental pollution, climate and meteorology.

HEALTH

Contribution to public health, life expectancy, prevention of illnesses and quality of life.

POLITICAL

Contribution to how policy makers act and how policies are constructed and to political stability.

SCIENTIFIC

Contribution to the subsequent progress of knowledge, the formation of disciplines, training and capacity building.

SOCIAL

Contribution to community welfare, quality of life, behaviour, practices and activities of people and groups.

TECHNOLOGICAL O

TRAINING

Contribution to the creation of product, process and service innovations.

qualifications

European Science Foundation Impact Classifications

2.2 Measures to maximise impact - Dissemination, exploitation and communication [e.g. 5 pages]

Describe the planned measures to maximise the impact of your project by providing a first version of your 'plan for the dissemination and exploitation including communication activities'. Describe the dissemination, exploitation and communication measures that are planned, and the target group(s) addressed (e.g. scientific community, end users, financial actors, public at large).

Please remember that this plan is an admissibility condition, unless the work programme topic explicitly states otherwise. In case your proposal is selected for funding, a more detailed 'plan for dissemination and exploitation including communication activities' will need to be provided as a mandatory project deliverable within 6 months after signature date. This plan shall be periodically updated in alignment with the project's progress.

Communication measures should promote the project throughout the full lifespan of the project. The aim is to inform and reach out to society and show the activities performed, and the use and the benefits the project will have for citizens. Activities must be strategically planned, with clear objectives, start at the outset and continue through the lifetime of the project. The description of the communication activities needs to state the main messages as well as the tools and channels that will be used to reach out to each of the chosen target groups.

All measures should be proportionate to the scale of the project, and should contain concrete actions to be implemented both during and after the end of the project, e.g. standardisation activities. Your plan should give due consideration to the possible follow-up of your project, once it is finished. In the justification, explain why each measure chosen is best suited to reach the target group addressed. Where relevant, and for innovation actions, in particular, describe the measures for a plausible path to commercialise the innovations.

If exploitation is expected primarily in non-associated third countries, justify by explaining how that exploitation is still in the Union's interest.

Describe possible feedback to policy measures generated by the project that will contribute to designing, monitoring, reviewing and rectifying (if necessary) existing policy and programmatic measures or shaping and supporting the implementation of new policy initiatives and decisions.

Differenze tra Disseminazione e comunicazione

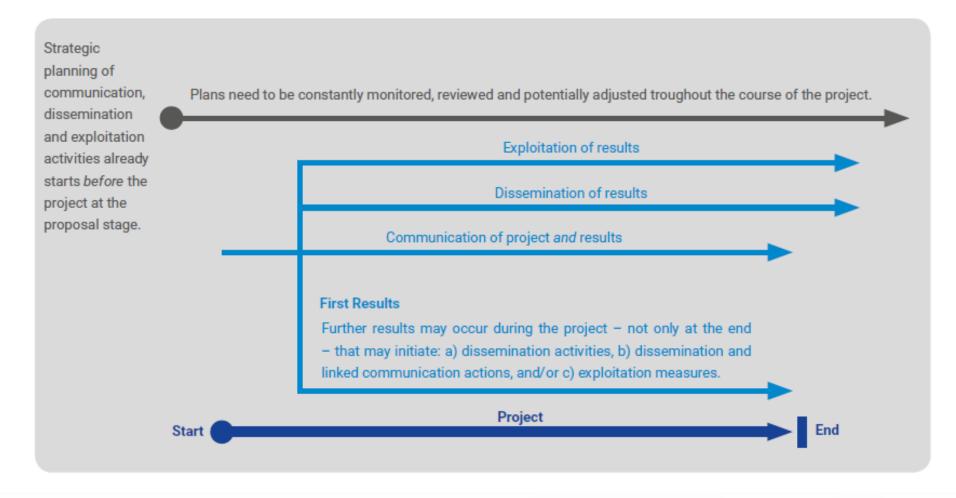

→ Disseminazione	→ Comunicazione (Outreach)
Collegato solo ai risultati	Collegato ai risultati e al progetto
Audience che può usare il risultato	Audience multiplo
Target con un alto grado di alfabetizzazione scientifica	Target con conoscenza differente
Favorire lo sfruttamento dei risultati	Aumentare la visibilità del progetto e dei suoi risultati
Inizia con la produzione dei primi risultati	Parte sin da subito
Scientific publications Policy brief/roadmap Training/demonstration Sharing results on online repository (research data, software, reports)	Newsletter Press release Project factsheet, brochure Social media (blogs, Twitter, Facebook, LinkedIn)

Project website, videos, interview, articles in magazines, exhibitions/ open days, guided visits, conference, presentation and workshops.

<u>Disseminazione, Comunicazione e sfruttamento nel life-cycle del progetto</u>

2.2 Measures to maximise impact - Dissemination, exploitation and communication [e.g. 5 pages]

Outline your strategy for the management of intellectual property, foreseen protection measures, such as patents, design rights, copyright, trade secrets, etc., and how these would be used to support exploitation.

If your project is selected, you will need an appropriate consortium agreement to manage (amongst other things) the <u>ownership and access to key knowledge (IPR, research data etc.)</u>. Where relevant, these will allow you, collectively and individually, to pursue market opportunities arising from the project.

If your project is selected, you must indicate the owner(s) of the results (results ownership list) in the final periodic report.

Grant Vs Consortium Agreement

DOCUMENT	SIGNATURE	MEMBERS	Content	
Document	WHEN	wнo	WHAT	
Grant	Grant At the of GAP (GA		It establishes the rights and obligations of the beneficiaries	
Agreement (GA)	preparation) phase	European Commission	towards the EU IP rules are not negotiable	
Consortium Agreement (CA)	During GAP	Project Coordinator and beneficiaries	It establishes the legal basis for the division of rights, obligations and responsibilities among the beneficiaries IP rules must be agreed among the partners	

IPR Helpdesk Fact Sheet

https://www.iprhelpdesk.eu/sites/default/files/newsdocuments/FS How to manage IP in H2020 grant preparation 0.pdf

Summary 2.3

Provide a summary of this section by presenting in the canvas below the key elements of your project impact pathway and of the measures to maximise its impact.

THE IMPACT SECTION!

SPECIFIC NEEDS

EXPECTED RESULTS

D & E & C MEASURES

What are the specific needs that triggered this project?

Example 1

Most airports use process floworiented models based on static mathematical values limiting the optimal management of passenger flow and hampering the accurate use of the available resources to the actual demand of passengers.

Example 2

Electronic components need to get smaller and lighter to match the expectations of the end-users. At the same time there is a problem of sourcing of raw materials that has an environmental impact.

What do you expect to generate by the end of the project?

Example 1

Successful large-scale demonstrator:

Successful large-scale demonstrator: Trial with 3 airports of an advanced forecasting system for proactive airport passenger flow management.

Algorithmic model:

Novel algorithmic model for proactive airport passenger flow management.

Example 2

Publication of a scientific discovery on transparent electronics.

New product: More sustainable electronic circuits.

Three PhD students trained.

What dissemination, exploitation and communication measures will you apply to the results?

Example 1

Exploitation: Patenting the algorithmic model.

Dissemination towards the scientific community and airports:

Scientific publication with the results of the large-scale demonstration.

Communication towards citizens: An event in a shopping mall to show how the outcomes of the action are relevant to our everyday lives.

Example 2

Exploitation of the new product: Patenting the new product; Licencing to major electronic companies.

Dissemination towards the scientific community and industry:
Participating at conferences; Developing a platform of material compositions for industry; Participation at EC project portfolios to disseminate the results as part of a group and maximise the visibility vis-à-vis companies

TARGET GROUPS	OUTCOMES	IMPACTS
Who will use or further up-take the results of the project? Who will benefit from the results of the project? Example 1 9 European airports: Schiphol, Brussels airport, etc. The European Union aviation safety agency. Air passengers (indirect). Example 2 End-users: consumers of electronic devices. Major electronic companies: Samsung, Apple, etc. Scientific community (field of transparent electronics).	What change do you expect to see after successful dissemination and exploitation of project results to the target group(s)? Example 1 Up-take by airports: 9 European airports adopt the advanced forecasting system demonstrated during the project. Example 2 High use of the scientific discovery published (measured with the relative rate of citation index of project publications). A major electronic company (Samsung or Apple) exploits/uses the new product in their manufacturing.	What are the expected wider scientific, economic and societal effects of the project contributing to the expected impacts outlined in the respective destination in the work programme? Example 1 Scientific: New breakthrough scientific discover on passenger forecast modelling. Economic: Increased airport efficiency Size: 15% increase of maximum passenger capacity in European airports, leading to a 28% reduction in infrastructure expansion costs. Example 2 Scientific: New breakthrough scientific discover on transparent electronics. Economic/Technological: A new market for tour enabled electronic devices. Societal: Lower climate impact of electronics manufacturing (including through material sourcing and waste management).

Topic: Decrease the incidence of mental health and burnout in Health Care Professionals and in the workplace

Outcomes:

- Health Care Professional and industry workers will have access to a digital solution that will monitor their mental health and susceptibility for burnout
- Involvement of SSH and SME is highly recommended

Scope:

- O The applicants should make use of <u>digital solutions and Al to develop a new application</u> with wide cultural coverage tackling mental health and burnout
- O The application should be made <u>accessible to a wide community</u> considering equity of access at EU level

Practical example

Specific Needs

What are the specific needs that triggered this project?

Increase of mental health issues in the HCP community at EU level

Increase of burnout cases at workplace

Lack of digital solution, easy to use and of easy access to all, to prevent mental health issues

Expected results

What do you expect to generate by the end of the project?

Development of the user interface app Informed consent

Pilot in 6 MS 5 hospitals 2 large industries

1st prototype

Monitoring Improvment of app

Dissemination, Exploitation, Communication measures

What dissemination, exploitation and communication measures will you aply to the results?

Health days focused on mental health

Startup for the app exploitation

Participation in international eHealth exhibitions

Focus groups with end-users

Target groups

Who will use or further up-take the results of the project? Who will benefit from the results?

Industry workers Health care professionals

Innovators in the eHealth area

Insurance companies

Outcomes

What change do you expect to see after successfull dissemination and exploitation of project results to the targest groups?

Business plan

Implementation of the start-up

Interest of insurance companies in the app

HCP and industry workers are aware of the issue of mental health and burnout

Impacts

What are the expected wider scientific, economic and societal effects of the project contributing to the expected impacts outlined in the respective destination in the work programme?

Exploitation of the app for HCP (start-up/SME)

Decrease the incidence of mental Health in HCP and industry workers

Wide use of the app at EU level

Practical example

TOPIC: Data-driven decision-support tools for better health care delivery and policy-making with a focus on cancer

SPECIFIC NEEDS	EXPECTED RESULTS	D & E & C MEASURES	
- Skin cancer patients treated with current	Platform: A big EU and beyond data storage	Dissemination: scientific publication with	
therapy lack a predictive biomarker.	platform for providing to physicians AI models	results on our platform and AI models	
- Biomarker XY, the currently approved one,	for co-decision making, patients empowerment		
has many limits. It does not precisely	and researchers will be developed and validated	Exploitation: Patent for medical device	
address the current therapy in a tailor way	in a retro and prospective clinical study.		
leading to a reduced survival, undue	Algorithms: a set of novel models for data	Communication: a dedicated project	
toxicity and costly therapy	extraction and prediction will be crafted for skin	website will be available in order to share	
	cancer prediction.	with all the target groups the data	
TARGET GROUPS	OUTCOMES	IMPACTS	
Skin cancer patients	- Use of the co-decision making AI tool provided	- Improving Overall Survival and Quality of	
Healthcare professionals	by the our app to patients and physicians.	Life in skin cancer patient.	
Researchers in skin cancer field	- Lung cancer community will use the new	- Reduce toxicity burden for skin cancer	
Healthcare authorities and policy makers	platform to share and exchange ideas and novel	patients	
General Public	results.	- Reduce costs for healthcare	
SME	- Creation of a strong connection among EU and	- Improving physician-patient relationship	
	US for policy on data sharing.	- Boost the EU Extra-EU exchange	

Practical example

Criterion 3 Implementation

<u>Application Form – Part B structure</u>

1. EXCELLENCE

2. IMPACT

3. IMPLEMENTATION

What

What is the project about?

Why

Why should we do the project? What evidence do we collect and measure in the project to demonstrate the projects value?

How to achieve the objectives?

Proposal Template Part B

1. Excellence

- 1.1 Objectives and ambition [e.g. 4 pages]
- 1.2 Methodology [e.g. 15 pages]

2. Impact

- 2.1 Project's pathways towards impact [e.g. 4 pages]
- 2.2 Measures to maximise impact Dissemination, exploitation and comm. [e.g. 5 pages]
- 2.3 Summary [table]

3. Quality and efficiency of the implementation

- 3.1 Work plan and resources [e.g. 14 pages including tables]
- 3.2 Capacity of participants and consortium as a whole [e.g. 3 pages]

Evaluation Criteria for Excellence (RIA/IA)

- Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall.
- Capacity and role of each participant, and extent to which the consortium as a whole brings together the necessary expertise.

Score = 0 to 5

"IMPLEMENTATION" Glossary

WORK PACKAGE a major sub-division of the proposed project

MILESTONES

RISK

TASK core activities in which a Work Package is divided

a distinct output of the project, meaningful in terms of the project's overall objectives and **DELIVERABLE**

constituted by a **report**, a **document**, a **technical diagram**, a **software** etc;

means control points in the project that help to chart progress - completion of a key deliverable, allowing the next phase of the work to begin. They may also be needed at intermediary points so that, if problems have arisen, corrective measures can be taken.

A milestone may be a critical decision point in the project

where, for example, the consortium must decide which of several technologies

to adopt for further development

CRITICAL plausible event or issue that could have a high adverse impact on the ability of the project to achieve its objectives. Likelyhood: estimated probability that the risk will materialise even after taking account of the mitigating measures put in place. Severity: The relative

seriousness of the risk and the significance of its effect.

3.1 Work plan and resources [e.g. 14 pages – including tables]

- ✓ brief presentation of the **overall structure** of the work plan;
- √ timing of the different work packages and their components (Gantt chart or similar);
- No more "governance structure" ✓ graphical presentation of the components showing how they **inter-relate** (**Pert chart** or similar).
- ✓ **detailed work description**, i.e list of:
 - work packages (table 3.1a); and their description (table 3.1b);
 - ❖ WP Management is recommended (technically not mandatory); here you may describe the main elements of your structure, do be developed in details in the CA. Management is not evaluated at proposal level.
 - ❖ Ethics: you can include it if needed, however following the ethic review at GAP phase a new WP can be added by the PO (you can negotiate to merge the two ethics WPs)
 - > deliverables (table 3.1c);
 - > milestones (table 3.1d);
 - > critical risks, relating to project implementation, (table 3.1e).
- ✓ **number of person months** required (table 3.1f)
- ✓ description and justification of **subcontracting** costs for each participant (table 3.1g)
- ✓ justifications for 'purchase costs' (table 3.1h); for participants where those costs exceed 15% of the personnel costs (according to the budget table in proposal part A);

Example

3.1 Work plan and resources

3.1.1 Overall structure of the work plan

XYX main goal is to introduce a novel PDSS tool by developing its individual system components, integrating them into the final system, and performing a clinical and technological assessment. The project defines a working plan based on the integration between IT, advanced mathematics and statistics, graphics applied to IT solutions, and clinical and translational research, with the final aim to obtain a tool that can apply for certification and commercialization as medical devices. The working plan will be developed as follow:

Development of the decision support tools for patients and physicians.

- 1. **Data Capturing**: collection and analysis of clinical, biological, and multi-OMICS data through a retrospective and a prospective multicenter clinical study **WP3**. QoL and Psychological measurements will be conducted in the prospective study phase to evaluate psychological impact of the users **WP4**.
- Knowledge extraction, learning and reasoning: integration of all collected data for patient-specific tumours characterization. Creation of a predictive models' library and reasoning techniques for the prediction of response to IO in NSCLC patients (WP5, WP6);
- 3. **XAI:** development of user-engaging visual data representations and interaction tools to support patients and physicians decisions **WP4**, **WP7**);
- 4. Construction of the Platform to integrate the patients' data and the tools developed to provide information in an accessible way WP8.

Impact assessment and qualification for the market.

- 5. **Impact assessment**: overall assessment of the scientific, clinical, and socio-economic value and impacts of the tools developed in the project WP8 and WP9).
- 6. Market analysis and definition of business plans, preparing the CE certifications, set-up of the qualification for medical devices, preparation of exploitation plans and commercial agreements (WP10)

Evaluation and monitoring of ethical, privacy and security aspects will be continuous (WP2). A constant coordination effort (WP1) will grant the achievement of the XYX goals, communicated and disseminated through the whole length of the project to general public and relevant stakeholders (WP10).

Although it takes some time to write it, the work plan should come almost last in your proposal preparation.

This is because you should carefully design first your project objectives, concept and methodology, and even most of your impact section before diving into the details of how you implement your project.

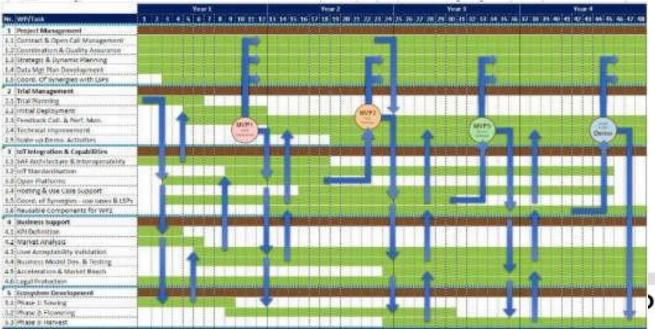

Do not do the reverse, that is to start with the WPs and then defining your objectives and concept. This will cause you to fail at defining objectives and the concept properly.

- > Brief presentation of the **overall structure of the work plan.** E.g.
 - ➤ PERT (Project Evaluation and Review Technique) Chart——
 - ➤ **GANT**T Chart

<u>Links among each WP</u> (or a combination of WP) to the relevant objective(s) and/or any main conceptual/methodological aspect(s). The links can be one-to-one, one-to-many, many-to-one, or many-to-many, as needed. This table or illustration should be accompanied by text that will clearly explain all the links.

To identify **dependencies between tasks**, assign resources for each task, identify **task start and end dates**, and work out the **overall project duration**.

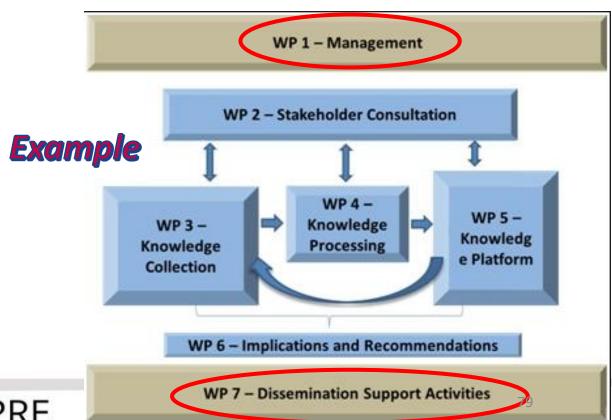

Table 3.1b – WP Description

- On average 1-2 page(s) per WP
- Keep number of WPs reasonable (between 4 and 8)
- Synthetic description of Objectives (2-3 lines)
- No more than 6-7 tasks per WP
- Around 2-3 deliverable per WP
- At least 1-2 Milestone per WP
- Consider to have a 'Ethics" W P

required

"Comm&Diss" can be split from "Expl." (if needed)

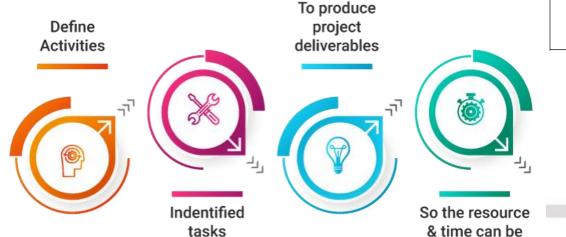

For each work package:

Work package number	
▶ Work package title	

A Participants involved in each WP and their efforts are shown in table 3.1f. Lead participant and starting and end date of each WP are shown in table 3.1a.)

Objectives

Description of work (where appropriate, broken down into tasks), lead partner and role of participants. Deliverables linked to each WP are listed in table 3.1c (no need to repeat the information here).

estimated

Table 3.1c - List of Deliverables

R: Document, report (excluding the periodic and final reports)

DEM: Demonstrator, pilot, prototype, plan designs

DEC: Websites, patents filing, press & media actions, videos, etc.

DATA: Data sets, microdata, etc. DMP: Data Management Plan

ETHICS: Deliverables related to ethics issues.
SECURITY: Deliverables related to security issues

OTHER: Software, technical diagram, algorithms, models, etc..

PU - Public, fully open, e.g. web (Deliverables flagged as public will be automatically published in CORDIS project's page)

SEN - Sensitive, limited under the conditions of the Grant Agreement **Classified R-UE/EU-R** - EU RESTRICTED under the Commission Decision No2015/444

Classified C-UE/EU-C - EU CONFIDENTIAL under the Commission Decision No2015/444

Classified S-UE/EU-S - EU SECRET under the Commission Decision No2015/444

Example

Sort per delivery date

livery date
36
50
2,M24,M40,M54
24, M40
24, M40
24, M40
24, M40
36 12 24 24

They become

official contractual
obligations under
the grant
agreement.

- Deliverables must be <u>defined carefully</u> and you must <u>provide a sufficient number</u> of them in order to reassure evaluators on the seriousness of the project.
- It is generally considered good practice to have at least 1 deliverable per task (in most cases at the end of the task) to assess the quality of its achievements and justify the funding.
- > For long tasks (more than 18 months), an intermediary deliverable can be useful.

Table 3.1d - List of Milestones

#	Milestone name	Related WPs	Delivery date	Means of verification
1	Set-up of the clinical study and related ethical issues	WP1, WP2, WP4, WP8, WP10	М3	Management operational, clinical study, ethical, and legal inventory organization in place. QoL app. Storage database. D1.1, D2.1, D4.2, D8.1, D8.5, D10.2, D10.3.
2	Technical and functional framework implemented	WP1, WP2, WP3, WP5, WP8, WP9, WP10	M12	Data structure for the defined architecture. Ethical aspects addressed, data acquisition system populated. Budget model and dissemination plan. D1.2, D1.3, D2.1, D3.1,

Show how you will confirm that the milestone has been attained. Refer to indicators if appropriate.

- > WHAT?: Milestones are control points for the project.
- ➤ WHY?: At any given moment in the project, you can <u>check whether you are ahead or behind schedule</u> against the milestones plan of the proposal. If you are behind schedule, appropriate measures should be taken to remedy the situation.
- > WHEN?: They should generally be placed at the end of important work packages or tasks.
- > HOW MANY?: Overall, it is a good practice to have at least 1-2 milestones per year.
- **HOW?:** Try and <u>link milestones to one (or more) of the existing deliverables</u>. In doing so, you will provide means of verification to the milestones and avoid writing yet another document. Doing that will surely **save** you time and work during the project execution.

Table 3.1e - Critical Risks

Risk management is the process of <u>identifying in advance</u>, <u>evaluating the probability and severity</u> and <u>controlling risks by</u> <u>implementing mitigation measures</u>.

Description of risks. Likelihood / Severity	WPs	Proposed risk-mitigation measures
10. Retrospective data are still dishomogeneous after the first part of the project (month 12) - High/high	WP5 -7	The model trained in this context does not require the availability of the whole dataset to be trained. One might start with the use of different data to one at a time, processing them as a whole as soon as the process of merging is completed.
11. Not enough data to get meaningful results using classical data-driven approaches - Probability: Medium/Medium	WP5 -7	We will use techniques to reduce the complexity of the model to still be able to work even in the case of paucity of data, integrate physician expertise in the models, and/or resort to jackknife or adjustment techniques.

Contingency Plans

Generally, the risks that can occur in a project are related with:

- ✓ Scheduling
- ✓ Unclear roles and responsibilities
- ✓ Financing
- ✓ Use of resources
- ✓ Technology

- ✓ Deliverable quality
- ✓ Partner commitment
- ✓ Unclear goals
- ✓ Customer or user

- ✓ Supplier or subcontractor
- ✓ Decision making
- ✓ Communication and transfer of information
- ✓ Regulations

Table 3.1f – Person months

Table 3.1h – Other cost categories

Participant Number/Short Name		
	Cost (€)	Justification
Internally invoiced goods and services	1	

3.2 Capacity of participants and consortium as a whole [e.g. 3 pages]

The individual members of the consortium are described in a separate section under Part A. There is no need to repeat that information here.

- Describe the consortium. How does it match the project's objectives, and bring together the necessary disciplinary and inter-disciplinary knowledge. Show how this includes expertise in social sciences and humanities, open science practices, and gender aspects of R&I, as appropriate.
- ¬ Show how the partners will have access to critical infrastructure needed to carry out the project activities.
- ☐ Describe how the members complement one another (and cover the value chain, where appropriate)
- In what way does each of them contribute to the project? Show that each has a valid role, and adequate resources in the project to fulfil that role.
- If applicable, describe the industrial/commercial involvement in the project to ensure exploitation of the results and explain why this is consistent with and will help to achieve the specific measures which are proposed for exploitation of the results of the project (see section 2.2).
- Other countries and international organisations: If one or more of the participants requesting EU funding is based in a country or is an international organisation that is not automatically eligible for such funding (entities from Member States of the EU, from Associated Countries and from one of the countries in the exhaustive list included in the Work Programme General Annexes B are automatically eligible for EU funding), explain why the participation of the entity in question is essential to successfully carry out the project.

Consortium as a whole

A combination of complementary expertise and resources available in Europe-wide different research institutes and SMEs has been established in the consortium ensuring the critical mass required to accomplish the foreseen work packages and tasks of the proposed project. Additionally, each one of the participating groups is expected, through the exchange of technical knowledge and co-operation, to promote its expertise at a higher rate leading to an accelerated progress at a European level.

A total number of thirty partners have been selected to cover the work programme of the VIP Products allocated in eleven work packages. Eleven partners are *SMEs* and have been scheduled to share the 30% of the total EU requested contribution. One large company participates in the VIP Products consortium.

An active engagement of *International Cooperation Partner Countries* has been established in VIP Products consortium. Apart from the European participants four partners from ICPC participate: IBFC from China, ARC from South Africa, and ITTLA from Mexico and INDEAR from Argentina.

Example

- Illustrate how the consortium can achieve the specific objectives of the project. Of course, not all the partners participate in all the objectives.
- Provide in just <u>a few lines some</u> <u>arguments to justify the expertise</u> such as by listing past similar achievements or participations in relevant projects.
- Infrastructure and equipment relevant to the project that each partner brings to the consortium.
- Industrial or commercial partners: demonstrate their capacity to exploit the results of the project.

Description of partner's competences and involvement/role(s)

Competences	Role
1- Ben 1 Italian no-profit research organization. Competences in XYX : Project Management and stakeholders engagement: has an extensive and long-lasting leadership experience in medium and large size projects (35 in the Framework Programmes). Stakeholders' engagement and co-creation activities in energy related EU funded projects (XPRESS, W4RES, Super-I, MARINA and RURITAGE). Communication and Dissemination of projects' results to different target audiences. Capacity building. 2- Ben 2	WP6 Leader (Project Management) Task 1.2, Task 1.3, Task 2.1 and Task 5.3 Leader WP3 Leader (Financing, techno- economic analysis and survey) Task 3.1, Task 3.3 and Task 3.4 leader
3 - Ben XX builds on the £400m invested by the Energy Technologies Institute in low-carbon energy, and the key works and intellectual property obtained in the execution of projects such as Perawat and Redapt which were formative in the acceleration of marine energy products and services. The will be able to offer technical and commercial skills and experience in marine energy, and a solid background in the innovation of complex systems	Task 1.4 and Task 3.2 leader

Example 1

Example II

Complementarity of the partnership per competence:

n.	Short name	Main Tasks involved	Major competences used in the project	
1	Partner 1	WP1 leader and T6.4 leader	Experience in Project Management as project coordinator (6 in HORIZON 2020, 17 in FP7, 4 in FP6) A national hub of research and innovation related information and multiplier throughout different stakeholders. is the host organization of the Italian National Contact Points for all the themes and sectors of HORIZON 2020. has a consolidated long lasting experience in dissemination activities towards policy makers (national and regional) and stakeholders (researchers, industry, SMEs, NGOs and civil society in general).	
2	Partner 2	WP4 leader and T2.3, T4.3, T4.4 leader	3, to t in tasks of the project. supported some important citizen engagement and communication initiatives for customers like Coca-cola.	
3	Partner 3	WP5 and T5.1 leader Based in Slovakia, is a private Slovak consultancy specialising in entrepreneurship and development through all its phases. Since 2009, the company managed to establish long-term relationships with European and international ass and companies, and contributed significantly to the creation and growth of several businesses. The staff of has long track-record of implestation of the company managed to establish long-term relationships with European and international ass and companies, and contributed significantly to the creation and growth of several businesses. The staff of stakeholder dialogue and citizen awareness activities not only in the framework of various EU funded projects. It will lead WP2.		
4	Partner 4	T4.1, T4.2 with IRPPS has a strong multidisciplinary skills on the Social informatics, Digital ecosystems, We lications, Knowledge sharing systems Networking and participatory methodologies. In particular will provide the social plan in WP4 personalising the functional the PLAKSS Framework.		
5	Partner 5	 WP3 and T3.2 leader Project coordination (CEED TECH); WP leadership (INSEC, DISCOVER-IT, DANDELION, BIOWAYS) Portfolio of more than 500 interdisciplinary (including bioeconomy) project/product/business development consultancy projects Implementation of more than 200 organisational, sectorial, regional, national and international strategic planning processes using public engageme Implementation of ca 100 events for knowledge transfer, awareness raising and promotion. 		
6	Partner X	WP6 and T6.1, T6.2 leader	 Marketing Communication, Integrative and creative communication to interact and inform. Manage, inform and communicate efficiently through the web. For productivity, collaboration and business Individual tailored marketing strategic guidance and advice for identifying appropriate marketing campaigns Organisation of 2 editions of the European Researchers' Night Portugal Participation at the www.securepart en project with implementation of an MML approach 	

Skill/competence matrix

consortium has been set up with expert partners in all relevant key topics (health literacy, mapping, annation compaits building immest accomments and and thoules to those accommendations

Proposal Part A Section 4 'Ethics Issues Table' – 10 Questions:

1. HUMAN	EMBRYONIC STEM CELLS AND HUMAN EMBRYOS		Page
Does this a	ctivity involve Human Embryonic Stem Cells (hESCs)?	○ Yes ○ No	
If YES:	Will they be directly derived from embryos within this project?	C Yes O No	
	Are they previously established cells lines?	C Yes ○ No	
	Are the cell lines registered in the European registry for human embryonic stem cell lines?	O Yes O No	
Does this a	ctivity involve the use of human embryos?	○ Yes ○ No	
If YES:	Will the activity lead to their destruction?	○ Yes ○ No	
2. HUMANS	×O		Page
Does this a	ctivity involve human participants?	○ Yes ○ No	
If YES:	Are they volunteers for nonmedical studies (e.g. social or human sciences research)?	○ Yes ○ No	
	Are they healthy volunteers for medical studies?	○ Yes ○ No	
	Are they patients for medical studies?	CYes O No	
	Are they potentially vulnerable individuals or groups?	○ Yes ○ No	
	Are they children/minors?	○ Yes ○ No	
	Are they other persons unable to give informed consent?	○ Yes ○ No	
	ctivity involve interventions (physical also including imaging technology, behavioural etc.) on the study participants?	○Yes ○No	
If YES:	Does it involve invasive techniques?	○ Yes ○ No	
	Does it involve collection of biological samples?	○ Yes ○ No	
Regulation	ctivity involve conducting a clinical study as defined by the Clinical Trial (EU 536/2014)? (using pharmaceuticals, biologicals, radiopharmaceuticals, or therapy medicinal products)	○ Yes ○ No	

If 'yes' for any questions, ethicself assessment to be completed in Part A (next slide)

Proposal Part A Section 4 'Ethics Issues Table' – Explanation:

ETHICS SELF-ASSESSMENT

If you have entered any issues in the ethics issue table, you must perform an ethics self-assessment in accordance with the guidelines "How to Complete your Ethics Self-Assessment" and complete the table below.

Ethical dimension of the objectives, methodology and likely impact

Explain in detail the identified issues in relation to:

- objectives of the activities (e.g. study of vulnerable populations, etc.)
- methodology (e.g. clinical trials, involvement of children, protection of personal data, etc.)
- the potential impact of the activities (e.g. environmental damage, stigmatisation of particular social groups, political or financial adverse consequences, misuse, etc.)

Compliance with ethical principles and relevant legislations

Describe how the issue(s) identified in the ethics issues table above will be addressed in order to adhere to the ethical principles and what will be done to ensure that the activities are compliant with the EU/national legal and ethical requirements of the country or countries where the tasks are to be carried out. It is reminded that for activities performed in a non-EU countries, they should also be allowed in at least one EU Member State.

Explanation about how you will deal with your Ethics issues in the proposal

If not, timeframe for approvals/ authorizations

Proposal Part A

- Section 4 'Ethics Issues Table' 10 Questions:
 - 1. Human embryonic stem cells (hESCs) and human embryos (hEs)
 - 2. Humans*
 - 3. Human cells/tissues*
 - 4. Protection of personal data (collection, recording, storage, deleting)
 - 5. Animals (favour alternative methods 3 R's: Replacement, Reduction, Refinement)
 - 6. Non-EU countries* (prohibited in EU, exploitation, risks)
 - 7. Environment, Health, Safety (fauna/flora, humans, research staff)
 - 8. Artificial intelligence
 - 9. Misuse (malevolent use of research results)
 - 10. Other ethics issues

How to complete your Ethics self-assessment

* Informed consent/Information sheet

Submission and evaluation

Evaluation criteria (RIAs and IAs)

EXCELLENCE

- ✓ Clarity and pertinence of the project's objectives, and the extent to which the proposed work is ambitious, and goes beyond the state-of-the-art.
- ✓ Soundness of the proposed methodology, including the underlying concepts, models, assumptions, interdisciplinary approaches, appropriate consideration of the gender dimension in research and innovation content, and the quality of open science practices including sharing and management of research outputs and engagement of citizens, civil society and end users where appropriate.

IMPACT

- Credibility of the pathways to achieve the expected outcomes and impacts specified in the work programme, and the likely scale and significance of the contributions due to the project.
- ✓ Suitability and quality of the measures to maximize expected outcomes and impacts, as set out in the dissemination and exploitation plan, including communication activities.

QUALITY AND EFFICIENCY OF THE IMPLEMENTATION

- ✓ Quality and effectiveness of the work plan, assessment of risks, and appropriateness of the effort assigned to work packages, and the resources overall.
- Capacity and role of each participant, and extent to which the consortium as a whole brings together the necessary expertise.

Ranking Criteria for ex aequo proposals

By order of priority

- 1. Aspects of the call that have not otherwise been covered by more highly ranked proposals
- 2. Scores on 'Excellence' then on 'Impact' (for IAs, scores on 'Impact' then 'Excellence')
- Gender balance among personnel named in the proposal who will be primarily responsible for carrying out the research and/or innovation activities, and who are included in the researchers table in the proposal
- 4. Geographical diversity
- 5. ...

Partenariati Vincenti e perdenti in Horizon 2020: Quali Caratteristiche?

Dalla prospettiva del Valutatore

Criterion	DO	DON'T
	Define objectives clearly.	Don't rush; poorly prepared proposal ruins even the most excellent plans.
	Be ambitious, but stay realistic.	Dan't report compething what is already
	Choose appropriate methodology.	Don't repeat something what is already done.
	Choose relevant partners and reliable coordinator.	Don't forget to include partners from differe regions, disciplines, stakeholder groups to compose a balanced consortium.
Excellence	Put effort on describing the state-of-art and proof of concept.	Don't forget to show the credibility of your consortium.
<u>8</u>	Create links with previous	
Ä	networks/projects and relevant policies.	Don't hesitate to provide detailed description about your methodology, technical solution
	Engage interdisciplinary expertise.	etc. Superficial description of the processes is often brought out as a major shortcoming
	Stay accurate, concise throughout the	
	proposal	If you have a novel approach – don't forget
	Bring out the innovation potential.	to describe it thoroughly and to support it with relevant references.
	If something stays unclear, contact your NCP.	

Dalla prospettiva del Valutatore

When planning be concrete and precise.

Quantify as much as possible.

Use financial figures and develop a business model and/or business plan.

Elaborate a convincing commercialisation plan.

Take into account all the expected impacts described in the topic.

Expected impacts should be derived and justified on previous results.

Plan a good cooperation with end users from the beginning of the project.

Involve policy makers, SMEs and industry in the proposal or plan a sustainable cooperation with them.

Describe industrial uptake of research results in details.

Develop an excellent dissemination plan (with diverse dissemination measures).

Address adequately and clearly explain dissemination of project results.

Ask for evaluation of impacts (by professionals).

Ask NCPs for cooperation.

Don't list irrelevant and unreal impacts.

Don't try to be very optimistic as it may cause the lack of credibility.

Don't use general descriptions, without any specific focus.

Don't use a weak or general analysis of the market and competition.

Don't miss concrete market details: potential market volumes, which markets, specific products, prices, etc.

Don't copy proposal's parts (mainly IPR management) from your previous project proposals.

Don't forget that the impact should be related to the particular concept, not to the call fiche.

Don't repeat (or copy) required impact from the call instead of development of your own proposal content.

Don't confuse dissemination with communication or exploitation.

Don't forget to use concrete information about expected environmental savings.

Impact

Dalla prospettiva del Valutatore

	Concrete and precise planning.	Don't use repetitions from within the text of
		the proposal.
	Details and Quantification.	
	Use Tables.	Don't do "copy-pastes" from other/ previous
		proposals.
Ę	Well-timed tasks and activities with well-	
ţi	balanced allocation to partners.	Don't forget the details - unsubstantiated/
) ta		unreferenced content/ figures/ numbers are
Implementation	Well-balanced and justified resources	causing a negative impression.
e e	and budget.	
<u>d</u>		Don't take beneficiaries/ Partners who are
트	Consortium with partners who	"joyriders" with no significant role and tasks.
	complement and synergize well in	
	expertise and tasks.	Don't plan vague Deliverables and
		Milestones.
	Consultation with NCP.	Lack of "Plan B" and contingency measures.
