

## CLASSE B

Settore: Innovazione agro-alimentare

**TEMA- *Migliorare la competitività e la sostenibilità dei produttori di compost e dei coltivatori di funghi attraverso la ricerca applicata, la sperimentazione e il trasferimento tecnologico.***

Richiesta promossa dal Centro di Ricerca Tecnologica sui Funghi della Rioja (CTICH), con sede in Spagna, che si occupa di migliorare la competitività e la sostenibilità dei produttori di compost e dei coltivatori di funghi attraverso la ricerca applicata, la sperimentazione e il trasferimento tecnologico.

Il Centro tecnologico di investigazione sui funghi (Ctich) di La Rioja - provincia e comunità autonoma della Spagna settentrionale - è interessata ad esplorare potenziali sinergie e gradirebbe anche organizzare un incontro online per uno scambio di idee.

MARIA LUISA TELLO MARTIN

<<Dear colleague, we would like to express our interest in establishing new collaborations within the framework of upcoming European project proposals related to the cultivated mushroom and agri-food innovation sectors. The Mushroom Technological Research Center of La Rioja (CTICH) is a research and innovation center founded in 2003 and based in Spain. CTICH operates under an agreement with the Government of La Rioja and is assigned to the Professional Association of Mushroom Growers of La Rioja, Navarra and Aragón (ASOCHAMP), representing a strong link between research activities and the productive sector. Our main mission is to enhance the competitiveness and sustainability of compost producers and mushroom growers through applied research, experimentation, and technology transfer. CTICH centralizes R&D activities in the cultivated mushroom sector, with a strong focus on: Development and optimization of new cultivation materials and substrates Innovative cultivation techniques Automation and digitalization across all stages of the production process Sustainability, resource efficiency, and circular economy approaches CTICH has solid experience participating in European-funded projects, both as project coordinator and as a partner, and is accustomed to working in multidisciplinary and international consortia. Our facilities allow us to carry out pilot-scale trials, experimental cultivation, and applied research closely aligned with industry needs, ensuring high impact and effective exploitation of results. We would be very pleased to explore potential synergies and discuss how CTICH could contribute to your consortium. We are open to different collaboration roles depending on project needs and would welcome the opportunity to arrange an online meeting to exchange ideas. Thank you for your time and interest. We look forward to the possibility of working together.

Kind regards, Mushroom Technological Research Center of La Rioja (CTICH) Spain [www.ctich.com](http://www.ctich.com) >>

I would be grateful for a reply to my e-mail address below:
